Work Experience

Will and Passion Academy

2021.01-2021.12

I maintained the overall posters and design work of the above academy. In addition, various contents were written and made to promote the academy and uploaded steadily to the official blog of the academy. When I was in charge of this job, I had excellent performance, with the number of views on the academy blog steadily exceeding 200 per day for the first time.

WE Cafe

2020.09-2020.02

It is a unique cafe divided into a study zone and a cafe zone, and worked in charge of making drinks and food and managing members. I often talked about the direction of promotion and operation and helped register Naver Place.

Duri Dental Clinic

2020.02-2020.09

I took turns responding to patients, telephone work, reservation management, and dental hygienists in the Department of Internal Affairs and Correction to learn various tasks. I could also see the importance of responding quickly and preparing in advance in unexpected situations or situations that needed to be quickly organized.

Kim&Lim Optometry Clinic

2019.12 - 2020.02

I worked as a reception in Dr. Kim and Lim Optometry Clinic. Doing pretest and make an appointment of the patient, I learned various way of how to deal with multi ages of patients.

Project Experience

Root

Figma / Protopie

ROOT is a family social communicating application that allows users to engage, connect, and share updates or news with their families abroad. Designed for easier accessibility for seniors. ROOT was a mobile application project from one of my classes, IAT 334: Interface Design, at Simon Fraser University.

SFU Snap Redesign

Figma

Our group was tasked to redesign the interface for the dining feature in the SFU Snap app that allows its users to find information about dining on SFU campus. This was a mobile application project from one of my classes, CMPT 363: User Interface Design, at Simon Fraser University. During this project, I was in charge of user research, developing new features, and re-designing and prototyping via Figma.

E-commerce Website

HTML / CSS / Javascript

It directly branded the E-commerce website[TROS], which sells simple, stylish clothes and bags, and designed the entire site layout into detailed pages. After creating a style guide divided by design components, HTML/CSS/Javascript built a complete and unified website.
